

Introducing AOSP Meetup Projects

Chris Simmonds, 2net

What are Projects?

- **AOSP Meetup Projects** are a series of projects that illustrate aspects of building and running Android from AOSP
- Short, practical, and in most cases hands-on
- A repository of useful, up-to-date, information

What projects do we have right now?

- I have created the first group of projects:
 - Setting up a build server
 - Building AOSP for the Goldfish Emulator
 - Building AOSP for the VIM3 board

<https://aospandaaos.github.io/projects.html>

Updates to Projects

- This is a community resource
 - please feel free to contribute
 - the project pages are written in "github" Markdown(*)
 - the source markdown files are at <https://github.com/aospandaaos/aospandaaos.github.io>
 - if you see a typo, or a technical error, or would like to add a new section, please create a pull request

(*) <https://docs.github.com/en/get-started/writing-on-github>

<https://github.com/adam-p/markdown-here/wiki/Markdown-Cheatsheet>

What is missing?

Here are some suggestions for new projects:

- More hardware platforms, e.g. Raspberry Pi, Beagle Play
- Integrating code from Android Studio into AOSP
- Debugging, profiling, and logging techniques
- Dedicated devices and kiosk mode
- ...

Just create a pull request and I'll review it and commit

If anyone wants to help out with reviewing and maintaining, just let me know
